conteúdo:

To connect the signal to the slot, we use `QObject::connect()`. There are several ways to connect signal and slots. The first is to use function pointers: `connect(sender, &QObject::destroyed, this, &MyObject::objectDestroyed);`

[wild toro slot demo](#)

To begin connecting objects, enter the signals and slots editing mode by opening the Edit menu and selecting Edit Signals/Slots, or by pressing the F4 key. All widgets and layouts on the form can be connected together. However, spacers just provide spacing hints to layouts, so they cannot be connected to other objects.
